Playing more numbers in Keno can increase your chances of hitting a winning number, but it usually lowers the payout for each win. On the other hand, playing fewer numbers usually increases the payout, but it also increases the risk of losing. The optimal strategy is to play 10 numbers, which gives you the best chance of winning without a huge payout.

What are the odds? The odds of winning the first prize (all 20 numbers) are 1 in 352,548,144. The odds of winning the second prize (19 numbers) are 1 in 11,718,272. The odds of winning the third prize (18 numbers) are 1 in 352,548. The odds of winning the fourth prize (17 numbers) are 1 in 11,718. The odds of winning the fifth prize (16 numbers) are 1 in 352. The odds of winning the sixth prize (15 numbers) are 1 in 11.7. The odds of winning the seventh prize (14 numbers) are 1 in 3.5. The odds of winning the eighth prize (13 numbers) are 1 in 1.17.
